

## IMMUNIZATION CLINICS

▫

The California Department of Public Health (CDPH) has declared an epidemic of Pertussis (whooping cough) in the State of California due to the high number of reported confirmed cases. Most children are vaccinated against this disease in early childhood. However, immunity wanes over time and a booster vaccine is recommended for anyone over the age of 10. **ALL students in grades 7-12 will be required to have received a Tdap (pertussis) booster before entering school in 2011.**
